Projects

Dance School Webpage

- **Computer Science**

- Database Management System
- Computer Architecture
- Software Project Management.

- It is a **static Webpage** made with **basic html and CSS**.
- It contains some information about a Dance School.
- I have also used **Transform and Transition properties** in it.
- **GitHub** link: **Dance School**

My Portfolio

- It is a **mobile responsive webpage** which contains basic information about myself.
- It is made **with HTML, CSS, Bootstrap** and **JS**.
- In this I have used **bootstrap** components like: card, grid etc.
- I have also **created “Flip card Effect”, “Change Theme (dark, light)”** in this.
- **GitHub** Link: **My Profile_**

Gym Management System

- It is a software made with **C language**.
- It uses **Basic File System** to store data.
- It is an **Admin Based Software**.
- I have used Structure, Function etc. In it.
- **GitHub** link: **Gym Management System**

CRM System Database

- It is a **database** made in **MS-Access**
- I have created tables like: customer, leads, opportunity etc.
- It uses **Button on Form for navigation**.
- **GitHub** link: **CRM-System**

Water Bill Management System

- It is a **software made with Java**.
- It uses **Object oriented concepts** for backend and **Swing and AWT** for frontend.
- It uses **JDBC and SQL** for database handling.
- It is an **admin-based** software where you can perform **CRED operations** on Customers and Meters.
- In this **bill is generated automatically** on the 1st of every month when the software is executed and if the bill is **not paid** for **three months** after due date the meter is **automatically cut-off**.
- It uses **Button on Form for navigation**.
- **GitHub** link: **Water Bill Management System_**

Online Burger Point Dashboard

- It is a **Admin Dashboard** made with PHP.
- It is **MVC based**.
- It uses **Object oriented concepts** for backend and HTML, CSS and Bootstrap for frontend.
- It uses **SQL** for database handling.
- It is an **admin-based** software where you can perform **CRED operations**.
- In this you can maintain **information** about categories, products, customers and their realted orders.
- **GitHub** link: **Online Burger Point**
